

In re Application of: Anthony FUTERMAN et al.
 Serial No.: 10/552,287
 Filed: January 4, 2007
 Final Office Action Mailing Date: April 8, 2009

Examiner: David J. STEADMAN
 Group Art Unit: 1656
 Attorney Docket: 30227

In the Claims:

1-122. (Canceled)

123. (Currently Amended) A composition-of-matter comprising a partially glycosylated crystallized glucocerebrosidase molecule consisting of having the amino acid sequence as set forth in SEQ ID NO: 1, wherein said crystallized glucocerebrosidase molecule is characterized by an X-ray diffraction capacity enabling generation of a set of structure coordinates defining a 3D structure of said glucocerebrosidase molecule or a portion thereof, wherein said set of structure coordinates is as set forth in Table 4, wherein said partially glycosylated glucocerebrosidase is glycosylated at asparagine 19 of said amino acid sequence; and is unglycosylated at ~~one or more glycosylation residues selected from the group consisting of~~ glycosylation residues corresponding to Asn59, Asn146 and Asn 270 of SEQ ID NO:1, wherein said glucocerebrosidase molecule is prepared by:

dialysis of a glucocerebrosidase solution overnight against phosphate-buffered saline (PBS) pH 7.0; deglycosylation of said glucocerebrosidase with N-glycosidase F; concentration of said glucocerebrosidase to 10 mg/ml in 1 millimolar 2-morpholinoethanesulfonic acid (MES) pH 6.6, 0.1 molar NaCl , 0.02 % NaN₃ by centrifugal concentration using a 10 kDa cut off filter;

said crystallized glucocerebrosidase molecule having unit cell dimensions of a = about 107.7 angstroms, b = about 285.2 angstroms and c = about 91.8 angstroms and a crystal space group of C222₁.

124. (Previously Presented) The composition-of-matter of claim 123, wherein said set of structure coordinates defines said 3D structure to a resolution of 2.9 angstroms or greater resolution.

125-128. (Canceled)

129. (Currently Amended) A purified glucocerebrosidase solution preparation comprising a population of glucocerebrosidase molecules, wherein substantially each of said glucocerebrosidase molecules:

In re Application of: Anthony FUTERMAN et al.
 Serial No.: 10/552,287
 Filed: January 4, 2007
 Final Office Action Mailing Date: April 8, 2009

Examiner: David J. STEADMAN
 Group Art Unit: 1656
 Attorney Docket: 30227

(i) consists of~~s~~ has the amino acid sequence as set forth by SEQ ID NO: 1;

(ii) is glycosylated at asparagine 19 of said amino acid sequence; and

(iii) is unglycosylated at ~~one or more~~ glycosylation residues selected from the group consisting of glycosylation residues corresponding to Asn59, Asn146 and Asn 270 of SEQ ID NO:1,

and wherein said glucocerebrosidase molecule is prepared by:

dialysis overnight against phosphate-buffered saline (PBS) pH 7.0;
deglycosylation of said glucocerebrosidase with N-glycosidase F; concentration of
said glucocerebrosidase to 10 mg/ml in 1 millimolar 2-morpholinoethanesulfonic acid
(MES) pH 6.6, 0.1 molar NaCl , 0.02 % NaN₃ by centrifugal concentration using a 10
kDa cut off filter;

and wherein said glucocerebrosidase is able to form pure glucocerebrosidase crystals having an X-ray diffraction capacity enabling generation of a set of structure coordinates defining a 3D structure of said glucocerebrosidase molecule, wherein said set of structure coordinates comprises the set of structural coordinates as set forth in Table 4, said crystals having unit cell dimensions of a = about 107.7 angstroms, b = about 285.2 angstroms and c = about 91.8 angstroms and a crystal space group of C222₁.

130-132. (Canceled)

133. (Currently Amended) The glucocerebrosidase solution~~preparation~~ of claim 129, wherein said population of glucocerebrosidase molecules has about the same capacity to catalyze hydrolysis of a glucocerebroside as a population of fully glycosylated glucocerebrosidase molecules having the amino acid sequence selected from the group consisting of SEQ ID NO: 1 or 8.

134. (Currently Amended) The glucocerebrosidase solution~~preparation~~ of claim 129, wherein at least one glycosylation residue~~moiety~~ of each of at least some of said glucocerebrosidase molecules has at least one exposed mannose residue.

Examiner: David J. STEADMAN
Group Art Unit: 1656
Attorney Docket: 30227

135. (Currently Amended) The glucocerebrosidase solutionpreparation of claim 129, wherein at least some of said glucocerebrosidase molecules are capable of being internalized by a phagocyte.

136. (Currently Amended) A pharmaceutical composition for treating a disease associated with glucocerebrosidase deficiency in a subject in need thereof, the pharmaceutical composition comprising a pharmaceutically acceptable carrier and, as an active ingredient, the glucocerebrosidase solutionpreparation of claim 129.

137. (Previously Presented) The pharmaceutical composition of claim 136, wherein said pharmaceutically acceptable carrier is selected so as to enable administration of the pharmaceutical composition via a route selected from the group consisting of the intravenous, topical, intranasal, transdermal, intradermal, oral, buccal, parenteral, rectal and inhalation route.

138. (Currently Amended) An article of manufacture comprising packaging material and a pharmaceutical composition, the article of manufacture being identified for treatment of a disease associated with glucocerebrosidase deficiency in a subject in need thereof; the pharmaceutical composition comprising a pharmaceutically acceptable carrier and, as an active ingredient, the glucocerebrosidase solutionpreparation of claim 129.

139. (Withdrawn) A method of producing a glucocerebrosidase preparation suitable for treatment of a disease associated with glucocerebrosidase deficiency, the method comprising exposing a plurality of glucocerebrosidase molecules to conditions suitable for partial deglycosylation thereof so as to form a population of partially deglycosylated glucocerebrosidase molecules each characterized by an amino acid sequence:

(i) glycosylated at, or having an aspartic acid residue at, glycosylation residue 1 thereof; and

(ii) lacking glycosylation at one or more glycosylation residues thereof selected from the group consisting of glycosylation residues 2, 3 and 4,

Attorney Docket: 30227

thereby producing the glucocerebrosidase preparation suitable for treatment of the disease associated with glucocerebrosidase deficiency.

140. (Withdrawn) The method of claim 139, further comprising, prior to and/or concomitantly with said exposing said plurality of glucocerebrosidase molecules to said conditions, subjecting said plurality of glucocerebrosidase molecules to conditions suitable for exposing at least one mannose residue of at least one glycosylation moiety of each of at least some of said glucocerebrosidase molecules of said plurality of glucocerebrosidase molecules.

141. (Withdrawn) The method of claim 139, further comprising subjecting said population of partially deglycosylated glucocerebrosidase molecules to conditions suitable for exposing at least one mannose residue of at least one glycosylation moiety of each at least some of said partially glycosylated glucocerebrosidase molecules.

142. (Withdrawn) The method of claim 139, wherein said conditions suitable for partial deglycosylation of said glucocerebrosidase molecules include treating said plurality of glucocerebrosidase molecules with a glycosidase.

143. (Withdrawn) The method of claim 139, wherein said conditions suitable for partial deglycosylation of said glucocerebrosidase molecules include treating said plurality of glucocerebrosidase molecules with peptide N-glycosidase F.

144. (Withdrawn) The method of claim 139, wherein said amino acid sequence is at least 95 percent homologous to an amino acid sequence set forth by SEQ ID NO: 1 or 8;

145. (Withdrawn) The method of claim 144, wherein said glycosylation residue 1 is represented by Asn19 of SEQ ID NO: 1, 8 or 16.

146. (Withdrawn) The method of claim 144, wherein said glycosylation residue 2 is represented by Asn59 of SEQ ID NO: 1, 8 or 16.

Attorney Docket: 30227

147. (Withdrawn) The method of claim 144, wherein said glycosylation residue 3 is represented by Asn146 of SEQ ID NO: 1, 8 or 16.

148. (Withdrawn) The method of claim 144, wherein said glycosylation residue 4 is represented by Asn270 of SEQ ID NO: 1, 8 or 16.

149. (Withdrawn) The method of claim 139, wherein the disease associated with glucocerebrosidase deficiency is Gaucher disease.

150. (Withdrawn) A method of increasing glucocerebrosidase activity in a cell, the method comprising exposing the cell to the glucocerebrosidase preparation of claim 129, thereby inducing substantial glucocerebrosidase activity in a cell.

151. (Withdrawn) A method of treating a disease associated with glucocerebrosidase deficiency in a subject in need thereof, the method comprising administering to the subject in need thereof a therapeutically effective amount of the glucocerebrosidase preparation of claim 129, thereby treating the disease associated with glucocerebrosidase deficiency in the subject.

152. (Withdrawn) The method of claim 151, wherein the disease associated with glucocerebrosidase deficiency is Gaucher disease.

153. (Withdrawn) A method of identifying a compound capable of correcting an impaired enzymatic activity of a mutant glucocerebrosidase molecule, the method comprising:

(a) obtaining a first set of structure coordinates, said first set of structure coordinates defining a 3D structure of a glucocerebrosidase molecule capable of displaying normal enzymatic activity or a portion thereof;

(b) computationally generating using said first set of structure coordinates a second set of structure coordinates, said second set of structure coordinates defining a predicted 3D structure of the mutant glucocerebrosidase molecule or a portion thereof; and

In re Application of: Anthony FUTERMAN et al.
Serial No.: 10/552,287

Attorney Docket: 30227

(c) computationally identifying, using said second set of structure coordinates, a compound capable of interacting with the mutant glucocerebrosidase molecule in such a way as to correct the impaired enzymatic activity thereof, thereby identifying the compound capable of correcting the impaired enzymatic activity of the mutant glucocerebrosidase molecule.

154. (Withdrawn) A computing platform capable of generating a model representing a 3D structure of a glucocerebrosidase molecule or a portion thereof, the computing platform comprising:

- (a) a data-storage device storing data comprising a set of structure coordinates defining the 3D structure of the glucocerebrosidase molecule or the portion thereof; and
- (b) a processing unit being for generating the model representing the 3D structure from said data stored in said data-storage device.

155. (Withdrawn) A computer-readable medium comprising, in a retrievable format, data including a set of structure coordinates defining a 3D structure of a glucocerebrosidase molecule or a portion thereof, wherein said set of structure coordinates defines said 3D structure at a resolution of 2.9 angstroms or higher, and/or wherein an amino acid sequence of said glucocerebrosidase molecule is partially glycosylated.

156. (Withdrawn) A computer generated model representing a 3D structure of a glucocerebrosidase molecule or a portion thereof, wherein the model represents said glucocerebrosidase molecule or a portion thereof at a resolution of 2.9 angstroms or higher, and/or wherein an amino acid sequence of said glucocerebrosidase molecule is partially glycosylated.

157. (New) The glucocerebrosidase solution of claim 129, wherein said population of glucocerebrosidase molecules has normal enzymatic activity compared to a population of fully glycosylated glucocerebrosidase molecules having the amino acid sequence selected from the group consisting of SEQ ID NO: 1 or 8.
